1.ABSTRACT

The Content Creator Blog Manager is a React-based web application that helps freelance writers and content creators manage blog drafts efficiently. Users can create, edit, categorize, search, and organize blog posts through a modern dashboard interface. The project demonstrates React, TypeScript, routing, context-based state management, and local storage integration.

PROBLEM STATEMENT

Content creators often manage multiple drafts across different topics and statuses. Without a centralized system, tracking progress, organizing content, and maintaining productivity becomes difficult.

OBJECTIVES

- Build a responsive blog management dashboard
- Create, edit, view, and delete blog drafts
- Organize posts using categories and statuses
- Provide search and filtering features
- Improve content workflow and productivity

PROJECT SCOPE

The application supports blog draft management, post categorization, status tracking, search functionality, dashboard statistics, and local data storage. Future enhancements may include authentication, cloud synchronization, publishing integrations, and collaboration tools.

TECHNOLOGIES USED

- React.js
- TypeScript
- Vite
- HTML5
- CSS3
- React Context API
- Local Storage
- React Router
- Git & GitHub

APPLICATION FLOW

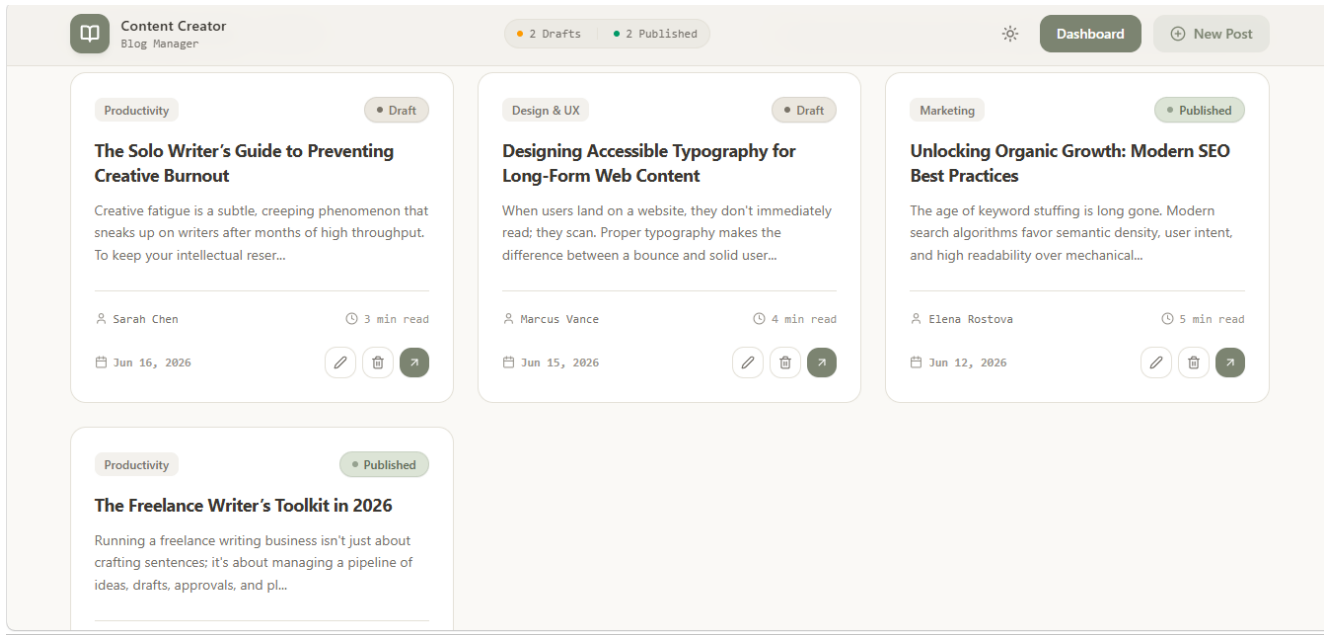

- User opens the dashboard
- User creates or edits blog drafts
- Posts are categorized and stored
- User searches and filters content
- Dashboard displays content statistics

KEY REACT CONCEPTS USED

- Components
- Props
- State Management
- Context API
- React Hooks
- Routing
- Conditional Rendering

EXPECTED OUTPUT

A clean dashboard where content creators can manage blog drafts, organize content, track statuses, and improve workflow efficiency.

CHALLENGES FACED

- Managing shared application state
- Implementing search and filtering
- Data persistence using local storage
- Responsive UI development

LEARNING OUTCOMES

- React and TypeScript development
- Context API state management
- CRUD operations implementation
- Routing and component architecture

CONCLUSION

The Content Creator Blog Manager provides an effective solution for organizing and managing blog content. The project showcases practical frontend development skills using React and improves productivity through streamlined content management.
